COMPAC THE SURFACES COMPANY 1

COMPAC "The Surfaces Company" is one of the most important companies producing quartz surfaces with "engineered stone" technology.

Strategically situated at Abrantes (Portugal) - next to the quartz quarries and the logistic platform that is Lisbon harbour to supply USA, Latin America, UK, and North Europe - the factory sits on a plot of 600.000 m² of which 50,000 m² house use the four production lines which full capacity can exceed 2 million square meters per year.

From 2003, this Spanish family-run company provides its technological quartz products to all the world through an extensive international network of distributors and its own offices in Portugal, Spain, France, UK, Belgium, Singapore, Middle East and the United States.

The large investment in R&D&I made in recent years has resulted in such innovative products as the first pure white "Absolute Blanc" or incorporating plat BIO resind in Nature line, the first technological quartz countertops have the natural stone appearance thanks to the grain's depth effect.

COMPAC
THE SURFACES COMPANY

What is technological quartz?

2

The technological quartz is a surfacsc composed of up to 95% natural quartz in which pigments and resins are adddes and by a process called "engineered stone" are compacted by vacuum vibrocompression obtaining a material with high resistance and decorative qualities.

Quartz is one of the most abundant minerals on the Earth's crust, and it comes in a very wide range of types of qualities. The Mohs scale, which compares the hardness of minerals depending on their capacity to score the surface of softer minerals, places quartz in position number 7, under the hardest elements: diamonds (10), corundum (sapphire) (9), and topaz (8).

KEY ADVANTAGES

3

High hardness and resistance to abrasion and scratching.

Practically zero porosity, preventing the absorption of water or other liquid. Consequently the Compac technological quartz does not need antibacterial chemicals, since the absence of pores prevents bacteria acting as a natural bacteriostatic.

Resistant to fats, oils and acids from foods: lemon, tomato, wine, etc. Great flexural strength and impact resistance.

Easy to clean and maintain.

The resins BIO technological innovation

Adding **BIO resins** during the production processes COMPAC has created a new quartz product with superior physical, mechanical and decorative features and mores respectful to the environment.

A good R + D + I department job has made COMPAC to achieve a technologically advanced product, increasing its resistance to abrasion, UV and with lower internal stresses.

Incorporating BIO resins from renewable plant sources is a very important technological advance to the market and benefits the entire distribution channel, especially in the handling by fabricators because of its lower shrinkage and internal stresses, supports better the bending, increases its impact resistance,

cracks and cutting fissures, minimizing the slabs' curvature during the storage and, due to its hardness, makes easier the polishing and finishing work.

From renewable plant sources, Bio resins produce no volatile emissions to the atmosphere, resulting in a safer and healthier product for the whole society.

5

Applications and uses

Compac Quartz is highly recommended for household surfaces that come into contact with fatty foods or cleaning products; Such as countertops, walls and floors in kitchens and bathrooms. Extraordinary technical properties such as hardness, strength, zero porosity and easy maintenance make the material suitable.

Due its low porosity it is perfect to be used in places where water and moisture are frequent: gyms, sports centres, spas, locker rooms and showers. Strength and versatility make it the ideal product for all those places which have to support high traffic of people: cinemas, shopping centres, hospitals, airports, government buildings etc. For such places ease of maintenance is important, and the ability to combine large decorative formats and different thickness, reducing the number of joint surfaces.

COLOR CHART

COMPAC has created a wide range of colours and textures, able to satisfy any decorative need by combining materials with different furniture and environments.

It highlights references with BIO resins, which colours and textures that enhance the decorative qualities of natural stones, with a mineral streaks depth effect very difficult to overcome.

The New York Collection combines its own unique urban style with a minimalistic open approach to modern living. The colours of the collection have a perfect GLACÉ finish, unique to COMPAC which highlights the colour, depth and definition of grain and offers less reflection than other quartz worksurfaces. It's easy to clean and maintain too.

Main Advantages

Minimal water absorption

Uses: Worktops, vanity tops, floors,
walls and high pedestrian transit
areas (stores, shopping centers,
museums...)Formats: Tiles in 60x7,
30x30, 60x30, 60x60 cm
and slabs in 305x140 cm.Standardized thicknesses: Tile
format 12 mm and slab format 12,
20 and 30 mm

Maximum durability

Maximum impact and flexural
resistance

Resistant to acids, oils, liquids...

High abrasion resistance

Low cost maintenance and easy
cleaning

COMPAC TECHNOLOGICAL
QUARTZ is composed up to 95%
pure quartz, 5-7% agglomerate
polymer in high-quality polyester or
natural resin and 1% pigment.
Quartz is one of the hardest
minerals in nature and gives
Compac technological quartz
countertops outstanding resistance
to abrasion and scratching levels.

BIO

The line BIO is made with resins
from renewable plant sources

Better resistance to UV

Lower contraction and
internal stresses

Simpler edge polishing

More heat resistant

Comparative technical table with any other materials

Technological COMPAC quartz is an engineered quartz surface that looks, feels and weights like natural granite and marble. Yet its strength, hardness and competitive price position it as the superior choice over natural stone, ceramics or plastic solid surfaces. It represents aesthetics, cohesion, reliability and cleanness.

Recommendations for care and maintenance.

For periodical maintenance of COMPAC Technological Quartz materials, due to their exceptional physical and chemical characteristics, it is only needed a regular cleaning with a neutral pH product soap/detergent, rinse with water and dry with a dry microfiber cloth or absorbent paper towel. To eliminate any remains or residues, (Eg. oil or fat, wine, vinegar, lemon, soft drinks, coffee, etc.) from the COMPAC TECHNOLOGICAL QUARTZ surface, just wipe with a damp cloth impregnate with neutral pH detergent, rinse with water and dry it.

As follows we will describe some simple treatment for the most common problems:

- **Fat stains:** dilute a small amount of detergent in some water and rub over the stain using a cloth. Next, rinse it off with water.
- **Water lime marks:** pour some vinegar (or any other diluted weak acid such as hydrochloric cid) directly on the surface to be treated. Rinse it off with plenty of water.
- **Silicone stains:** Scrape off using a blade and use a little solvent for any remains left behind (acetone or ethanol).

BASIC TECHNICAL SPECIFICATION - MAINTENANCE TIPS

- Do not fit COMPAC Technological Quartz outside or in places where UV ray lamps are fitted (in places subject to intense solar radiation or UV lamps).
- Do not place objects recently removed from heat on COMPAC Technological Quartz surfaces on a regular basis (frying pans, etc.).
- Do not use water repellents or sealers to enhance the shine.
- Do not use strippers, caustic soda, degreasers or products with pH in excess of 10 or chlorine based products. Do not use products that contain hydrofluoric acid or dichloromethane. If you use bleach or solvent, you must rinse it off using water and never leave it long-time in contact with the surface.
- COMPAC Technological Quartz should not be polished, either on flooring or work surfaces.
- Aisle the countertop from external heat sources.

CLEANING COMPAC TECHNOLOGICAL QUARTZ POLISHED

Due to their unique physical and mechanical properties and their zero porosity, quartz countertops with polished finish (gloss), only need simple cleaning. You can use any multisurfaces cleaning product with neutral pH, not more than 10, available at any supermarket. You can also use specific products for cleaning the hob.

In all cases, for best results use a microfiber cloth good quality.

Removing stains from the dishwasher.

The common dishwashing detergents may form a shiny coat on the satin counter, causing stains. These residues can only be removed using products with low ammonia concentration: apply them on the surface and leave them for a few minutes. Then rub it gently with a soft brush and rinse with plenty of water. Finally dry with a soft cloth or kitchen paper.

Removing marker, food colours and fruit stains.

Pen stains can be cleaned with a little alcohol. The food colouring and fruit disappear with diluted bleach solution.

Removing dry spots caused by hard water.

Generally you can remove them with vinegar dissolved in water and a soft cloth. For removing dry water spots, use warm water and vinegar, leaving a few minutes to soften the stain, then rub gently with a cloth until it disappears, rinse it with water and dry.

NOT USE!

Besides those previously mentioned, highly alkaline products or chlorine based, such as oven cleaner or solvents, are not suitable for cleaning COMPAC quartz countertops. Neither should use corrosives, strippers, hydrofluoric acid, caustic soda, or products with a pH above 10. Furniture waxes and oil soaps or degreasing are not indicated, as they can change the brightness of the surface.

CLEANING THE COUNTERTOPS WITH OTHER FINISHES

These surfaces require more care and maintenance as they are much more sensitive to everyday life stains.

COMPAC offers “Lifetime Guarantee” on the bathroom countertops kitchen worktops for residential use. The terms, conditions and instructions for registration are in our site www.compac.es.

The guarantee registration form is made automatically completing the data requested by the system, thus facilitating the administration of the guarantee certificate.

GEOGRAPHICAL LIMITATION / CONSULT YOUR DEALER.

ISO 9001

Bureau Veritas SA Certification to COMPAC, that applies to the design, manufacture and marketing of agglomerated stone.

This certification is a valuable asset because it demonstrates our achievements and ongoing commitment to run business in a deeply professional and consistent way.

GREENGUARD

The certificate issued by the Greenguard Environmental Institute ensures that COMPAC products compliant indoor air quality with respect to volatile organic compounds (VOCs). Seals are awarded Greenguard Indoor Air Quality Certified (Certified IAQ) and The Greenguard Children & Schools Certified (Certificate of Schools and Children's Venues), the second is one of the most stringent in the industry.

NSF

NSF certification is given by the recognized U.S. agency that acts on the issuance of certificates of health, hygiene and environmental considered COMPAC products safe material for direct contact with all food.

The U.S. Green Building Council (USGBC) is transforming the way we design, build, maintain and operate our buildings, homes and communities.

USGBC is committed to a prosperous and sustainable future through cost-efficient and energy-saving green buildings

Classification of construction products and building elements of fire performance.

Certificate for the quartz product range by AFITILICOF Centre of Fire Testing and Research (Association for the Promotion of Research and Fire Safety Technology) according IMO Resolution A.653 according to IMO Resolution MSC 61 FTPC Code (67).

Alimentary contact certificate

All COMPAC Technological Quartz products comply with the European regulation EC 1935/2004 for articles intended to come into contact with food.
